## **RAW MANGO CUTTING MACHINES**

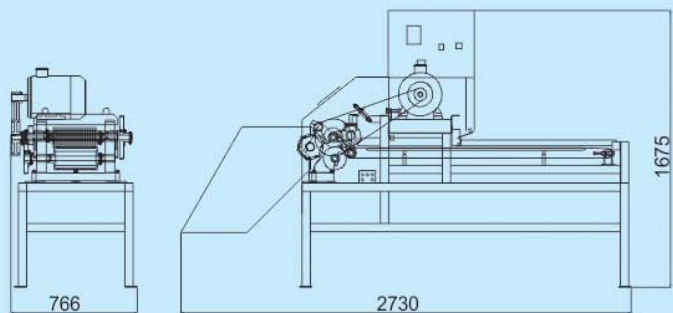

## RAW MANGO CUTTING MACHINE (RMCM-500)

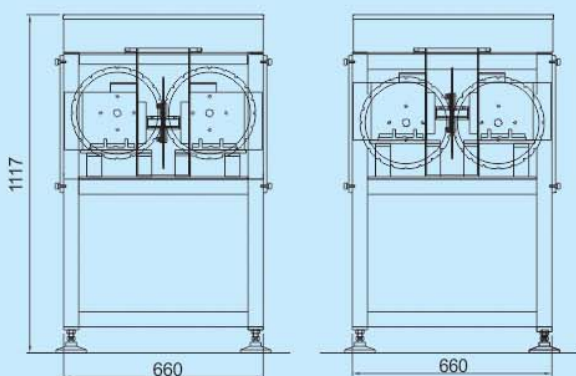

- Suitable for cutting raw mangoes into small pieces.
- De-seeded raw mangoes are to be fed into this machine through a small opening provided on the in-feed tray. The mango pieces are made to pass through a set of circular cutters & through a set of cross cutters where cutting action takes place.
- Drive motor capacity is 5-HP.
- Output up to 500-kg per hour.
- Material of construction is SS-304/CF-8.
- Suitable for piece size of 15-mm X 15-mm

## RAW MANGO CUTTING MACHINE (RMCM-2000)

- Suitable for cutting raw mangoes into small pieces.
- De-seeded raw mango pieces are fed to the in-feed conveyor of this machine. It is passed through a set of circular cutter blades & then through a set of cross cutter blades where the cutting action takes place. The spacing between circular cutters will be 15 mm while the speed of cross cutter will be suitable for cut length of 15-mm.
- Driven by 5-HP capacity motor.
- SS-304 / CF-8 Construction.
- Capacity: 2000-kg / hour.

## QUARTER CUTTING MACHINE

- Suitable for cutting raw mangoes into 4-quarters.
- Whole mangoes after removing the stem are to be passed through the chute provided on the top tray. The whole mango passes through a set of 4-circular cutters that are located at right angles to each other & are rotating at very high speed. The cutting action takes place when the mango fruit is passing through the cutters.
- Separate 1.5-HP capacity motor is provided for each cutter.
- Capacity: Up to 1,000-kg per hour.
- SS-304 Construction.
